並不得書寫、畫記、作答。

國立清華大學 110 學年度碩士班考試入學試題

系所班組別：科技管理研究所
甲組

科目代碼：4702

考試科目：統計學

一作答注意事項一

1. 請核對答案卷（卡）上之准考證號、科目名稱是否正確。
2. 考試開始後，請於作答前先翻閱整份試題，是否有污損或試題印刷不清，得舉手請監試人員處理，但不得要求解釋題意。
3. 考生限在答案卷上標記「由此開始作答」區內作答，且不可書寫姓名、准考證號或與作答無關之其他文字或符號。
4. 答案卷用盡不得要求加頁。
5. 答案卷可用任何書寫工具作答，惟為方便閱卷辨識，請儘量使用藍色或黑色書寫；答案卡限用 2B 鉛筆畫記；如畫記不清（含未依範例畫記）致光學閱讀機無法辨識答案者，其後果一律由考生自行負責。
6. 其他應考規則、違規處理及扣分方式，請自行詳閱准考證明上「國立清華大學試場規則及違規處理辦法」，無法因本試題封面作答注意事項中未列明而稱未知悉。

考試科目 (4702)：統計學

共 6 頁，第 1 頁 *請在【答案卷】作答

1. A manufacturing company regularly conducts quality control checks at specified periods on the products it manufactures. Historically, the failure rate for LED light bulbs that the company manufactures is 2%. Suppose a random sample of 12 LED light bulbs is selected. What is the probability that
 - a. exactly one of the LED light bulbs is defective? (5%)
 - b. two or fewer of the LED light bulbs are defective? (5%)
2. Suppose X_i be a random variable from an independent and identical distribution, $i=1, 2, \dots, n$, and $X_i = 1$ with mean μ and variance σ^2 . Let
$$Y = \sum_{i=1}^n w_i X_i, \text{ where } \sum_{i=1}^n w_i = 1 \text{ and } w_i \neq \frac{1}{n}, \text{ and } Z = \frac{1}{n} \sum_{i=1}^n X_i$$
 - a. Compute the variance of Y and Z. (10%)
 - b. Are they unbiased estimator? Which one is more efficient? (10%)
3. You plan to conduct a marketing experiment in which students are to taste one of two different brands of soft drink. Their task is to correctly identify the brand tasted. You select a random sample of 200 students and assume that the students have no ability to distinguish between the two brands. (Hint: If an individual has no ability to distinguish between the two soft drinks, then the two brands are equally likely to be selected.)
 - a. What is the probability that the sample will have between 50% and 60% of the identifications correct? (5%)
 - b. The probability is 90% that the sample percentage is contained within what symmetrical limits of the population percentage? (5%)
 - c. What is the probability that the sample percentage of correct identifications is greater than 65%? (5%)
 - d. Which is more likely to occur—more than 60% correct identifications in the sample of 200 or more than 55% correct identifications in a sample of 1,000? Explain. (5%)

國立清華大學 110 學年度碩士班考試入學試題

考試科目 (4702)：統計學

共 6 頁，第 2 頁 *請在【答案卷】作答

4. The variable, X, is defined as the number of affairs within last year from R.C. Fair(1978), "A Theory of Extramarital Affairs," Journal of Political Economy 86, 45-61. The summary statistics and frequency table obtained from excel are as follows:

X	
Mean	1.455907
Median	0
Mode	0
standard deviation	3.298758
Variance	10.8818
Minimum	0
Maximun	12
number of observations	601

X	Frequency
0	451
1	34
2	17
3	19
4	0
5	0
6	0
7	42
8	0
9	0
10	0
11	0
12	38

- What assumptions must be made in order for X to be distributed as a Poisson random variable? Are these assumptions suitable for X? (10%)
- Using Poisson distribution, what is the (expected) probability that the number of affairs within last year is zero? Compared the number with median, what is the problem? Explain. (10%)

考試科目（4702）：統計學

共 6 頁，第 3 頁 *請在【答案卷】作答

5. Four experts rated two brands of coffee in a taste-testing experiment. A rating on a 7-point scale (1 = extremely unpleasing, 7 = extremely pleasing) is given for each of four characteristics: taste, aroma, richness, and acidity. The following data contain the ratings accumulated over all four characteristics:

EXPERT	BRAND	
	A	B
C.C.	24	26
S.E.	27	27
E.G.	19	22
B.L.	24	27

- a. At the 0.05 level of significance, is there evidence of a difference in the mean ratings between the two brands? (5%)
- b. What assumption is necessary in order to perform this test? (5%)
- c. Construct and interpret a 95% confidence interval estimate of the difference in the mean ratings between the two brands. (5%)
6. What makes sales leaders tick? Mercuri International conducted a study to explore sales strategies, processes, and support systems within businesses. Organizations were categorized by sales performance level (top performers vs. middle performers vs. bottom performers) and extent to which the organization invests in customer satisfaction. Results were organized into the following table.

LEVEL OF INVESTMENT	SALES PERFORMANCE LEVEL			
	Top	Middle	Bottom	Total
Annually	53	318	44	104
Every 2-4 years	40	245	23	721
Never	11	158	34	101
Total	104	721	101	926

Source: "Sales Excellence Survey 2017," available at bit.ly/2qRYm2.

At the 0.05 level of significance, is there evidence of a significant relationship between sales performance level and level of investment in customer satisfaction? (15%)

28	12.461	13.565	15.308	16.928	18.939	22.657	32.620	37.916	41.337	44.461	48.278	50.993
29	13.121	14.257	16.047	17.708	19.768	23.567	33.711	39.087	42.557	45.722	49.588	52.336
30	13.787	14.954	16.791	18.493	20.599	24.478	34.800	40.256	43.773	46.979	50.892	53.672

For larger values of degrees of freedom (df) the expression $Z = \sqrt{2x^2} - \sqrt{2(df)} - 1$ may be used and the resulting upper-tail area can be found from the cumulative standardized normal distribution (Table E.2).
